# OPERATIONAL MANAGEMENT FOR "STOCKISTS AND FABRICATION ABRASION RESISTANCE PLATE" IN INDONESIA

# Indra Pamungkas<sup>1</sup>, Rhian Indradewa<sup>2</sup>

<sup>1,2</sup>Fakultas Ekonomi dan Bisnis, Universitas Esa Unggul, Jakarta-Indonesia Email: pamungkas.indra@gmail.com<sup>1\*</sup>, rhian.indradewa@esaunggul.ac.id<sup>2</sup>

#### Abstract:

The steel industry between stockists and fabricators is very rare. Business Establishment PT. Gipan Metal Teknik Indonesia (PT.GMTI) combines stockists of abrasion resistant materials and the fabrication process that will be carried out by the company focuses on providing abrasion resistant materials from 4 to 20 thick. The company supports end to end services in the fabrication process which consists of design & drawing process, material, cutting plate, fabrication, forming up to the machining process. The investment value in this company is quite high, so to get a positive profit margin it really depends on operational planning where operational cost calculations are needed to run the company's business. The company makes a profit from the difference between stockist material sales and customization of the fabrication process and production operational costs. The purpose of this research is to determine the importance of operational influence in managing operations to gain company profits. The conclusion of this research is that the operational department needs to implement innovative strategies to be able to compete with competitors. fabrication industrial company.

Keywords: Establishment, Design and process, Calculation of operational costs

#### INTRODUCTION

The steel and construction industry recorded negative growth when the world experienced the Covid-19 pandemic storm in 2020, however, based on data from the coordinating ministry for the economy, it was noted that Indonesia's economic growth grew by 5,015 (YoY) in the fourth quarter of 2022. At the national level, the steel industry also plays an important role in infrastructure development and manufacturing industry (SUGIANTO, 2018). Indicators of success in the manufacturing industry are marked by the achievement of goals and a rapidly improving development process. The factors for this success cannot be separated from setting the basic 5 points, including financial management, production management, marketing management, human resource management and information management.

In forming a business venture, proper planning is definitely needed, in order to form and develop a business entity to avoid problems that could be detrimental (Suharjo, 2017); (Novel et al., 2023). Designing business strategies and operational planning are very important stages (Lawu & Ali, 2022); (Thaib & Emanuel, 2020). Operational planning is the stage of setting targets to achieve certain goals with planned implementation which can describe specific stages in a particular strategic planning model which describes how and the amount of resources that will be operated during a certain operational period (Ahmad, 2020); (Julyanthry et al., 2020). The operational planning stages describe information related to the sequence of business processes, resources, goals and objectives, explanations regarding products and processes, quality control and supply chain management related to operational delivery.

In operational planning, the company will focus on the stockist business of abrasion-resistant materials and the fabrication process, planning the operational framework as follows:

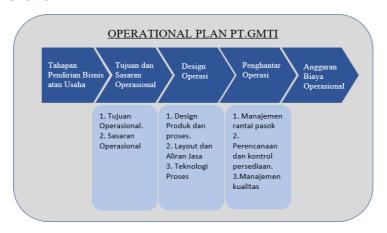

Figure.1 Operational plan of PT. GMTI

## Stages Establishment

The essence of operational planning is to determine the operational impact on a business's work in real-time, therefore operational planning is very important (Syaifullah & David, 2021); (Fauzan, 2021). The pace of business will be fast if the operational department implements appropriate and precise strategies in carrying out all operational aspects in increasing the pace of business (Taryana, Yanuar Rahmat Syah et al., 2021).

The establishment of the stockist business and the abrasion resistant material fabrication process began with the establishment of a company in the form of a Limited Liability Company (PT). The establishment of this company will follow the applicable provisions of Law Number 40 of 2007 concerning Limited Liability Companies (Nomor, 40 C.E.). In addition to establishing a legal entity in the form of a Limited Liability Company (PT), this stockist and fabrication process for abrasion-resistant materials also registered to become a member of The Indonesian Iron & Steel Industry Association

(IISIA) to receive information support related to the development of the Indonesian Iron and Steel industry, especially regarding the Indonesian Steel industry, market., regulations, technology, steel standards and steel galleries. The process consists of the following stages: (1) The deed of establishment must include KBLI (Indonesian Standard Classification of Business Fields) No. 2020-2591 relating to the Forging, Pressing, Printing and Metal Forming Industry; Powder Metallurgy. (2) Managing tax documents (Registered Certificate, NPWP and Taxable Entrepreneur Confirmation Letter (SPPKP)), (3) Managing Business Identification Numbers (NIB) and managing electronically integrated business permits (Online Single Submission (OSS)).

#### MATERIALS AND METHODS

This operational design is based on PT.GMTI's product and service on the Value Proposition Canvas model, namely PT.GMTI as a provider of abrasion resistance plate material and providing fabricated products that can be customized according to customer wishes with end to end product service. The running system has several subsystems that form a series and are connected to each other. Inputs are classified into fixed inputs which do not depend on the amount of production output and input levels which depend on the amount of output capacity to be produced. The GMTI process is a combination of labor, materials, equipment, technology to produce added value transformation of products so they can be sold. The output of PT GMTI's production process is supply of abrasion resistance plate materials, customize cutting plates and product fabrication .

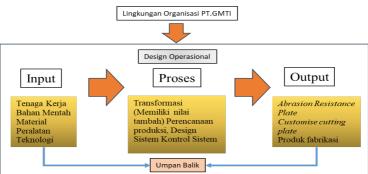

Figure 2. PT GMTI frame work

## **Business Process**

Business processes in the company stockist And abrasion resistance plate fabrication consists of from elements of management process, product realization, and supporting processes. Analysis business processes can maximizing every stages And help understand customer with more OK , anticipate his changing needs , prevailed existing competition , and also produce \_ product and innovative ideas to market .

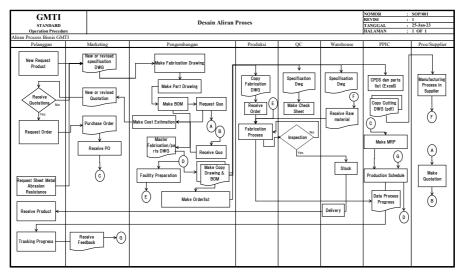

Figure 3. Business Process PT. GMTI

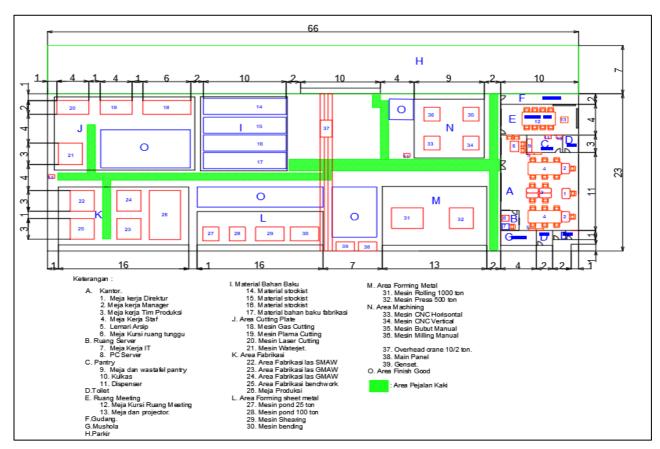

Activity process flow started from accepted request product from customers , counting cost product , development process, making MRP, production , up to product accepted by customer .

## **Product and Technology.**

Financial analysis shows the efficiency benefits that arise from being a market leader and having an integrated collection and delivery system that optimizes operational efficiency (M.GRANT, 2002). Factors that influence operational efficiency are process and product design to produce a product. The product design of this company's stockists is to provide abrasion-resistant materials in the form of sheet metal. Apart from that, it provides customized products which are also supported by fabrication processes such as: (1) Plasma cutting plate cutting process, which is a process used to cut steel and other metals of different thicknesses using a plasma torch. (2) laser cutting plate process, namely a material cutting process that uses a laser, producing high quality, dimensionally accurate cuts. (3) waterjet cutting, namely a cutter that works by spraying high-pressure and high-speed water onto the surface of a workpiece up to a thickness of 300 mm and has a high level of precision. (4) welding fabrication, namely a fabrication process in which two or more parts are joined together through heat, pressure, or both and form a joint when the parts cool. The first year's fabrication process will focus on SMAW welding and in the third year it will also use a GMAW welding machine. (5) Forming or shaping using bending and rolling processes, namely changing the shape of the metal by applying an external force so that plastic deformation occurs and the shape changes as desired. The material forming process uses 25 ton and 100 ton pond machines and in the third year uses 500 ton press and 1000 ton rolling machines. (6) CNC or manual machining process, namely the process of chip formation as a result of the tools installed on the machine tool, moving relative to the work piece which is gripped in the working area of the machine tool. Machine components made of steel have various shapes.

# **Layout Design**

PT. Factory layout needs. GMTI for initial development requires a factory area with a total land area of 1980 m2. Layout planning \_ under This is moment commencement business .

**Figure 4. Layout Planning** 

Development factory will started on 3rd year where will area needed for CNC machining machines and the 5th year will be development of press and bending roll areas.

# **Supply Chain Management**

Management chain sustainable supply \_ has appear as approach main for purposeful company \_ For can compete . The great benefit lies in collaborating with suppliers and customers to improve product design and processes that connect business with customers (Hasan, 2013).

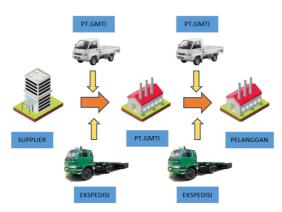

Figure 5. Supply chain PT. GMTI

PT. GMTI for can carrying out supply chain management according to function, has several approaches (1) Collaborating with 5 brands of Abrasion resistance plate material producers, namely Hardox, Abrex, Raex, JFE Everhard, and Wearpro. The aim of choosing this brand is to make it easier to purchase imported materials and also to get more competitive purchasing prices from suppliers. (2) Raw materials for LPG, O2, CO2 gas cylinders are selected from suppliers located around Jakarta and Bekasi. PT.GMTI will select 3 suppliers. (3) Procurement of SMAW and GMAW Welding Wire and Grinding Stones is selected from suppliers located in the Jabodetabek area.

In order to maintain stock availability of all raw materials used as input, PT. GMTI will prefer suppliers who are willing to enter into a 2 year work contract and can provide purchasing prices that can be standardized within a period of 2 months for local raw materials and 3-4 months for materials . abrasion resistance plate.

## **Management Quality**

Management quality This become set tool For make A company or organization experience repair Keep going continuously, that can be give effect Good to company For increase product and HR (Jauhar Winarto & Mahmudah El Madja, 2021). In application management quality is ensure products supplied \_ or generated by PT. GMTI has quality desired height \_ by customer . The following are several steps that will be implemented to implement quality management (1) Management determines the company's quality policy. (2) Identification and analysis of quality risks (3) Product quality planning (4) Implementation of quality control (5) Quality control (6) Replacement of NG products.

## **RESULTS AND DISCUSSION**

Influencing costs \_ cost PT. GMTI's operations consist of: from Cost Material standard , cost operations , costs acquisition of assets and cost pre-operation . The procurement of several assets at the start of the company was very large.

Like cost material standard, rent factory, overhead crane. This asset does require a fairly large allocation of funds. So providing this asset is a top priority for running the stockist and abrasion resistance plate fabrication business. Asset costs are budgeted at 25-30 % of total business costs.

All operational costs for 5 years required for stockist and fabrication business operations with a total projected income target within 5 years with total sales of approximately 29 billion rupiah.

With large investment costs and losses occurring in the first year, the stockist business and fabrication process must be run with a good, effective and efficient management strategy in order to reduce out-of-budget expenses and get high profits from running this business.

## Stock material control

Supply for Start-ups in the world is one key most importantly in operational company . According to Heizer and Render (2014) all organizations certainly have a planning system and inventory control system. In the 2nd year , after have a forecast for reduce cost storage of abrasion resistance plate material stock, PT. GMTI will collaborate with local distributors using the JIT (Just in Time) method which aims to store some stock which can be stored by the distributor and can reduce PT. GMTI will only stock material as much as 5% of the total monthly.

**Table 1. Inventory Material standard**

## **Projected Operational Costs**

Every company, whether a service or manufacturing company, has the main goal, namely to obtain maximum profits, and every business activity carried out by a company requires costs, including operational costs. If the company can reduce operational costs, the company will be able to increase net profit, and vice versa, if costs are wasted it will result in decreased profits (Rahmawati et al., 2021). Operational cost budget at PT. GMTI is divided into 3 cost groups, namely operational costs, asset acquisition costs and preoperation costs. To determine the annual operational cost plan, the product price and fabrication process must first be determined.

#### CONCLUSION

To ensure business operational costs can be controlled and according to budget plans, operational strategies need to be implemented as follows: (1) The work process is carried out effectively and efficiently and in collaboration with internal and external parties of the company. (2) create operational standards to ensure optimal processes (3) Quality management needs to be prioritized so that product re-work is not carried out frequently. (4) carry out continuous improvement involving employee participation. (5) Improve quality suppliers.
